

Protect your brand & clients, Block phishing attacks, & Increase your email deliverability

Establish and maintain complete DMARC Compliance for your corporate email, preventing abuse of your brand as well as phishing attacks against your business and customers

More than 90% of all hacking attacks and data breaches involve email, currently making it the largest threat to the company's cyber security. Most companies receive large amounts of malicious emails that are sent with a fake identity (spoofing). Part of these emails seeks to uncover cyber security weaknesses and steal login credentials (phishing). At the same time, the more targeted fraud attempts against the company (such as CEO Fraud & Business email Compromise) are an ever increasing threat.

A crucial part of improved email security is to implement DMARC, which provides a set of rules that ensures the company's outgoing email is verifiable for the authenticity of the recipients.

DMARC protects the company's own email domains from abuse such as spoofing and phishing.

By also verifying the company's incoming email with DMARC, your company will achieve better protection against spoofing, phishing and other email threats from cyber criminals.

The DMARC framework uses an array of existing and new email control mechanisms, and also adds a reporting standard where organizations can exchange reports on email compliance for DMARC. This can give the organizations a continuous overview and better control over who is trying to send emails on their behalf.

DMARC will only achieve full effect through a complete implementation (and reach of compliance), where the company rejects or quarantines all emails under the DMARC control checks and at the same time collects reports for rejected emails.

Centera DMARC Compliance is the complete solution for quickly establishing and maintaining DMARC compliance in the enterprise, providing easy implementation, monitoring, maintenance, collection and hosting of reports.

► Stop Phishing

Protect your employees by: monitor and block with DMARC validation against IT criminals trying to scam the company via fraudulent emails.

► Monitor & prevent abuse of your corporate identity

Protect your Customers by gaining continuous insight and overview of attempts to abuse your business identity via email.

► Accomplish and maintain DMARC compliance

DMARC compliance significantly reduces the company's threats & risks from email, while contributing to making email with business partners and customers less vulnerable to fraud attempts.

► Improve deliverability for business critical emails

A user-friendly management platform collects all tasks related to DMARC, while collecting and storing reports, enabling the company to implement any corrections in their email infrastructure, while protecting against false positives through DMARC control.

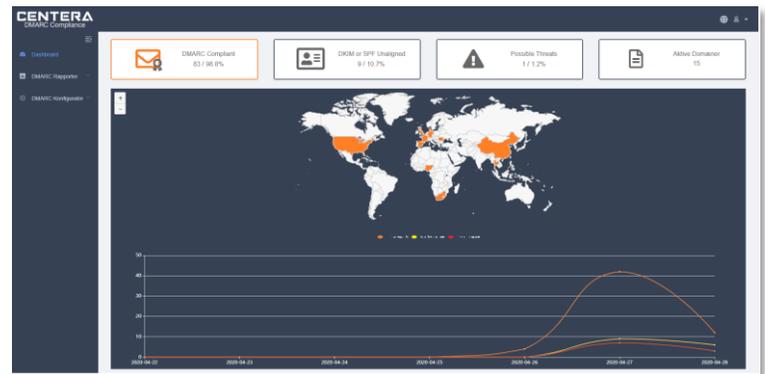

¹Verizon 2019 Data Breach Investigations Report

DMARC Compliance for all your email.

Centera DMARC Compliance is developed by Danish email security developers who have advised companies within email security since 2008 and DMARC since the emergence of the standard in 2012. The solution has been developed with a view to do complete implementation of DMARC Compliance then as simple as possible, with all the benefits of DMARC. The platform simultaneously monitors for DMARC configuration errors and omitted domains.

Key Elements of Centera DMARC Compliance

- **Cloudbased & secured platform for DMARC**
DMARC Configuration and Full DMARC Compliance Monitoring & notifications for maintenance and maintenance of DMARC configuration, including DNS record entries, DKIM and SPF
- **DMARC Reporting**
uncovering phishing og spoofing of emails
- **IP Reporting** that specifies IP addresses most frequently sent company emails that are blocked by DMARC control
- **Forensic View**, covering abuse of your company name, domain identity and other Brand Abuse
- **Hosted cloud service for your DMARC**
reporting and notifications, including 60 days of log & reports retention full retention
- **SPF Protect**
Create and maintain extended SPF records for your domains ensuring DMARC function and compliance with SPF records with more than 10 DNS lookups
- **Hosted cloud service for extended SPF**
- **Danish & English technical support via phone & email**

Dashboard provides a simple overview of events

Aggregated reports for DMARC email alignment. The table below shows details for various domains and their alignment with DMARC, DKIM, and SPF.

Domain	Volume	DMARC Compliance	DKIM Aligned	SPF Aligned
centera.com	88	100%	100%	100%
centera.dk	57	100%	100%	100%
centera.com	1	100%	100%	100%

IP	Geo	Volume	Policy Applied	DMARC	DKIM	SPF	Reporter
192.168.1.1	DK	1	None	None	None	None	Yahoo Inc.
192.168.1.1	DK	1	Quarantine	None	None	None	Google.com
